

AMENDMENTS TO THE CLAIMS:

Please cancel claims 1-45 without prejudice and add new claims 46-67 as follows:

1-45. Canceled.

46. (New) A method of controlling access to a network in a wireless communication system, the method performed by a terminal and comprising the steps of:

receiving, from the network, response condition information which is for a plurality of terminals that subscribed to a service via a common control channel;

determining whether to transmit a response message to the network on the basis of the received response condition information; and

transmitting the response message to the network if a terminal is qualified to respond to the network.

47. (New) The method of claim 46, wherein the service is a Multimedia Multicast/Broadcast Services (MBMS) service.

48. (New) The method of claim 46, wherein the response message is used for a count of a number of terminals which respond to the network among the plurality of terminals.

49. (New) The method of claim 46, wherein the plurality of terminals are positioned in one cell.

50. (New) The method of claim 46, wherein the plurality of terminals are divided into one or more terminal groups.

51. (New) The method of claim 46, wherein the response condition information is an initial parameter.

52. (New) The method of claim 46, wherein the response condition information is associated with selectively controlling whether the terminal needs to send the response message to the network.

53. (New) The method of claim 46, wherein the response condition information is associated with a terminal identifier.

54. (New) The method of claim 46, wherein the determining step uses a formula of  $UE\ id\ mod\ M$ .

55. (New) A method of controlling access to a network in a wireless communication system, the method performed by the network and comprising the steps of:

configuring response condition information for a plurality of terminals that subscribed to a service;

transmitting the response condition information to the plurality of terminals via a common control channel; and

receiving one or more response messages from the plurality of terminals, wherein the one or more response messages are in response to the response condition information transmitted from the network.

56. (New) The method of claim 55, wherein the response condition information is an initial parameter.

57. (New) The method of claim 55, wherein the one or more response messages are used for a count of a number of terminals.

58. (New) The method of claim 55, wherein the plurality of terminals are positioned in one cell.

59. (New) The method of claim 55, wherein the plurality of terminals are divided into one or more terminal groups.

60. (New) The method of claim 59, wherein the response condition information is transmitted to at least one selected terminal group among the one or more terminal groups.

61. (New) The method of claim 55, further comprising:

evaluating whether the response condition information needs to be updated based on the one or more response messages received by the network.

62. (New) The method of claim 55, further comprising:

updating the response condition information based on the one or more response messages received by the network; and

transmitting the updated response condition information to the plurality of terminals.

63. (New) The method of claim 61, wherein the step of evaluating whether the response condition information needs to be updated is based on total responses from the plurality of terminals in a cell serviced by the network.

64. (New) The method of claim 55, further comprising:

establishing a point-to-multipoint radio bearer for the service if a sufficient number of terminals have responded.

65. (New) The method of claim 55, further comprising:

establishing a point-to-point radio bearer for the service if a sufficient number of terminals have not responded.

66. (New) The method of claim 55, wherein the response condition information is selected by the network such that the total number of responses is less than the total number of terminals that subscribed to the service.

67. (New) The method of claim 55, wherein the service is an MBMS service.
